

## FaceTime with a Patient Using Hospital-Issued iPads

From the iPad's home screen:

1. Tap **Contacts**.
2. From Contacts, select the patient (obtain iPad # from nursing staff)
3. Tap **FaceTime**.

### Note:

This method of communication is designed for FaceTime between two *hospital-issued* iPads. If you FaceTime with a patient using your own personal device to communicate with the patient's hospital-issued iPad, your personal contact information will be exposed.
